Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-11, the allowability in combination with the other claimed features is because nowhere in the prior art is there an apparatus for controlling an electromagnetic valve actuator having supervision logic controller for generating initialization and transition signals in response to the final current command signals in response to the final current command signal and the event signals, the initialization and transition signals defining current pulse magnitude and duration for soft seating of the armature on a seating surface of cores associated with the open and close coils. Regarding claims 12-17, the allowability in combination with the other claimed features is because nowhere in the prior art is there a method for controlling an electromagnetic valve actuator comprising the steps of generating a third signal in response to the final current command signal defining a lower magnitude holding current pulse for soft seating of the armature on a seating surface of a core associated with the one coil.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
